PROFESSIONAL SUMMARY

Software and Data Engineer with hands-on experience building scalable data pipelines, migrating enterprise legacy systems to the cloud, and developing full-stack web applications. Proficient in Python, C++, and JavaScript, with enterprise expertise in AWS, Databricks, and Apache Spark. Strong problem-solving and development background with interests spanning backend systems, cloud technologies, and software engineering.

EXPERIENCE

Infosys

Specialist Programmer

Hyderabad, India

Dec 2024 – Present

- **Enterprise Data Migration & Architecture (Client: E.ON UK)** (*Feb 2026 – Present*)

- Developed reusable transformation logic in PySpark to ingest data from Oracle, SharePoint, and SQL Server sources into Databricks Lakehouse tables while maintaining schema consistency and data quality checks.
- Replicated and optimized existing Matillion data workflows into Databricks pipelines, ensuring data quality, schema consistency, and reduced processing latency.
- Improved pipeline reliability by introducing validation checks and incremental loading strategies, reducing data inconsistencies during migration workflows.

- **Cloudera Big Data Migration (Client: Charter Communications)** (*May 2025 – Dec 2025*)

- Migrated large-scale telecom datasets from on-prem Cloudera infrastructure to AWS-based storage and compute environments using PySpark, Amazon S3, and EC2.
- Developed and executed automated PySpark scripts and managed directed acyclic graphs (DAGs) to ensure reliable data orchestration and pipeline execution.
- Optimized PySpark ingestion for 4–5 TB partitioned datasets by introducing partition pruning and executor-level configuration tuning, reducing average pipeline runtime by nearly 30%.
- Integrated Apache Iceberg table formats to support scalable schema evolution and improve query efficiency for downstream analytics workloads.

- **Infosys Mysore Training (Specialist Programmer Trainee)** (*Dec 2024 – May 2025*)

- Completed intensive training under the Big Data Technology track with hands-on exposure to Python, SQL, PySpark, AWS, and Unix/Linux systems.
- Cleared multiple technical assessments focused on Big Data engineering, cloud infrastructure, and problem-solving as part of the training evaluation process.
- Developed a capstone project involving exploratory analysis of raw datasets using PySpark and Unix-based data processing workflows to derive actionable insights from large-scale data.

Svarn Infosys

Web Developer Intern

Remote

Jun 2023 – Jul 2023

- Collaborated with an agile engineering team to develop and deploy a responsive, fully functional client-facing web application for a Canadian client.
- Wrote clean, semantic HTML/CSS and JavaScript to ensure cross-browser compatibility and adherence to accessibility standards.

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, SQL, HTML/CSS

Cloud & Data Engineering: AWS (S3, EC2), Databricks, Apache Spark / PySpark

Web & Backend Development: Node.js, Express.js, React.js, Flask, RESTful APIs, WebSockets (Socket.io)

Databases: MySQL, MongoDB

Generative AI & Developer Productivity: GitHub Copilot, Prompt Engineering

Tools & Environment: Git/GitHub, Linux, Postman, VS Code

PROJECTS / OPEN-SOURCE

Real-Time Chat Application | [Frontend](#) | [Backend](#) *React.js, Node.js, Express.js, Socket.IO, MongoDB, Google OAuth*

- Developed a full-stack real-time messaging platform with Google OAuth authentication, Socket.IO-based communication, and MongoDB-based chat persistence.
- Implemented real-time messaging, media sharing and online status updates using WebSockets for low-latency user interactions.
- Designed an “Incognito Mode” feature that bypasses database persistence to allow temporary privacy-focused conversations without storing chat history.

AI Chess Arena | [Frontend](#) | [Backend](#) *React.js, Node.js, Express.js, Socket.IO, Chess.js*

- Built an interactive AI-powered chess platform that enables autonomous gameplay between Large Language Models (LLMs) from OpenAI, Groq, and OpenRouter APIs.
- Integrated multiple LLM providers and implemented dynamic move-generation workflows to simulate real-time AI vs AI chess matches using FEN-based game state handling.
- Built a responsive live game dashboard with move tracking, think-time monitoring, captured piece visualization, and downloadable PGN export support.

Vulnerability Scanner | [GitHub](#) *Python, Cybersecurity, Networking, Automation*

- Developed a Python-based web vulnerability scanner capable of automatically crawling websites and detecting reflected XSS vulnerabilities across URL parameters and form submissions.
- Explored practical cybersecurity concepts related to defensive security, scripting, and system-level analysis through hands-on experimentation.

EDUCATION

Dr. B.R. Ambedkar National Institute of Technology (NIT)
B.Tech in Computer Science and Engineering
CGPA: 7.47

Jalandhar, Punjab
Nov 2020 – 2024

ACHIEVEMENTS & EXTRACURRICULARS

- Solved **1000+** **DSA** problems across platforms including LeetCode, CodeChef, HackerRank, and GeeksforGeeks.
- Core Blue Team member at **0-day Hack Club**, the official cybersecurity club of NIT Jalandhar, with involvement in defensive security practices and cybersecurity learning activities.
- Core team member at **Gaming Geeks**, an inter-college gaming society responsible for organizing and managing competitive gaming tournaments and community events.
